Experiment 15: Creating and Testing a Snapshot

Aim:
To create a snapshot of a virtual machine and restore its previous state using VMware Workstation.

Algorithm / Steps:

1. Start the virtual machine.
2. Navigate to VM → Snapshot → Take Snapshot.
3. Enter a snapshot name and description.
4. Make some changes inside the virtual machine.
5. Open Snapshot Manager.
6. Select the previously created snapshot.
7. Click Go To to restore the previous state.
8. Verify that the previous state is restored.

Output:

The virtual machine was successfully restored to its previous snapshot state.

Result:

Snapshot creation and restoration were successfully performed.
