Experiment 12: Installation of Type-2 Hypervisor

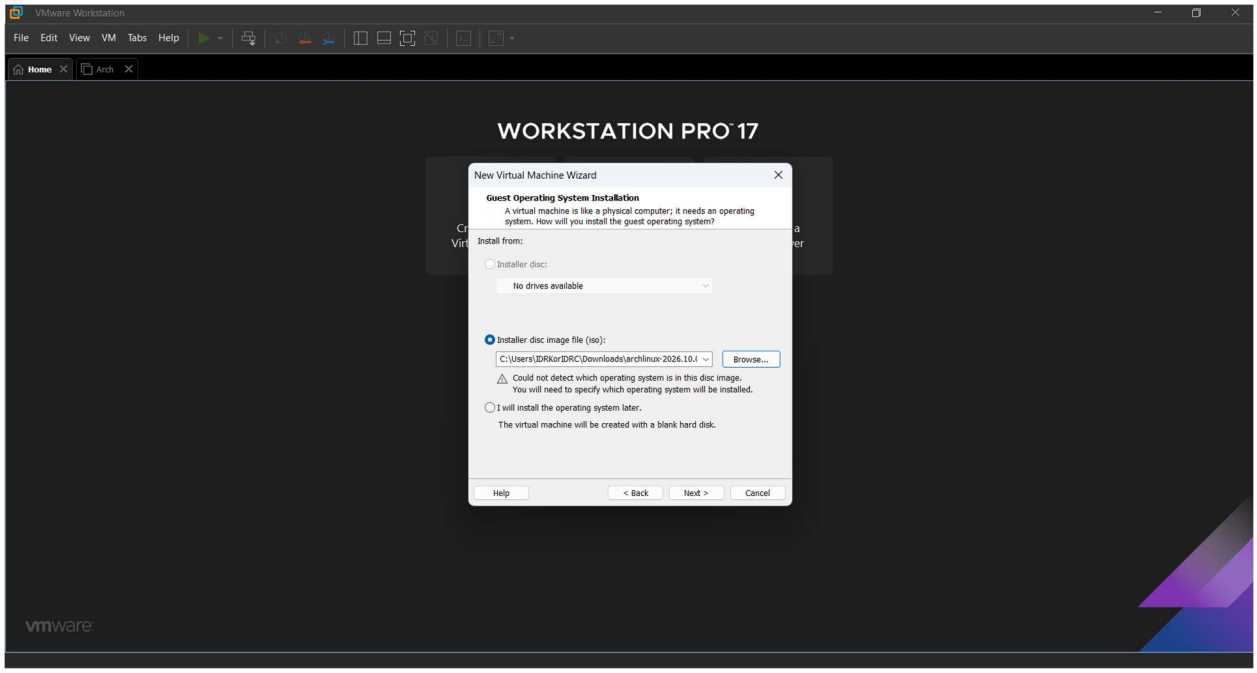

Aim:
To install and configure a Type-2 hypervisor using VMware Workstation and create a virtual machine with a host operating system.

Algorithm / Steps:

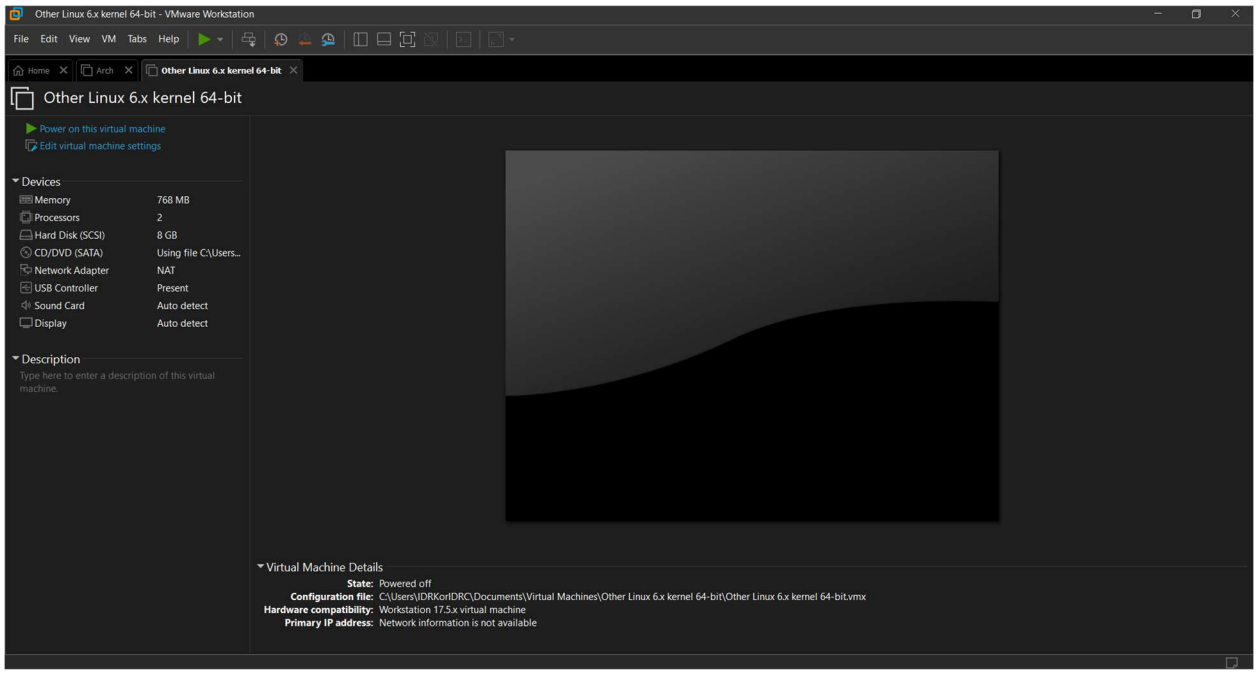

1. Download and install VMware Workstation.
2. Launch VMware Workstation.

3. Select Create a New Virtual Machine.
4. Choose the OS installation ISO file.

5. Configure the virtual machine settings.
6. Complete the setup and start the virtual machine.

Output:

VMware Workstation was installed and a virtual machine was successfully created.

Result:

Type-2 virtualization was successfully demonstrated using VMware Workstation.
